

What your patent is really worth, and the honest path to cash.

U.S. patent (number withheld) · Provably-Fair On-Chain Asset Synthesis (Commit, Burn, Reveal, Mint)

Prepared for a confidential holder · Sample · Holder Anonymized

Most inventors get one of two bad answers. A broker says "**we will find you a buyer**" and asks for a fee up front. A valuation firm hands back a number with no plan. Neither tells you the truth, or what to do Monday. So here is the truth on your patent.

VERDICT: Build then monetize

ASSERTED TODAY

\$40k – \$200k

Thin market for a single blockchain patent with no product using it yet.

AS A FIRST-MOVER POSITION

\$0.6M – \$0.9M

Risk-weighted, on a \$200k–\$400k cost-to-replicate floor, once the market forms.

We already did the work you would have to do

- We found **15 companies** across 5 categories whose products line up with your claims.
- We found the **one granted competitor patent** that changes how you should approach this. Approach it wrong and you invite a fight.
- We found the **live product** a buyer's lawyer will raise as prior art, so you can answer it before they ask.

Your on-chain proof is real: the commit, the burn, the reveal, and the mint are all publicly reconstructable. **One risk you need to hear:** the obviousness question. The full report shows exactly how a challenger frames it, and how you answer.

This page is free. Here is what the \$2,450 Playbook adds:

- The **names** of every target, each mapped to the claims it reads on.
- The **people to contact**, and a ready-to-send opener for each.
- The **ranked paths** to cash, with dollars, deal terms, and who executes each.
- A **90-day plan**, a **deadline docket**, and what every move costs you out of pocket.
- How not to get fleeced by a broker.

We only sell you the Playbook if your patent has a real path. If it does not, we tell you that for free. That is the whole point.
